

Controller

1.frist create controller using artisan command(here you can see)

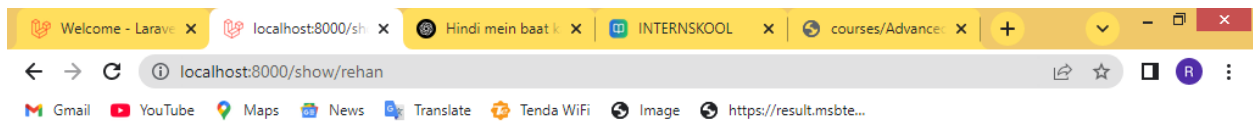

2. Define methods inside the controller to return views or data.

3. Link routes to the controller methods in web.php.

4. . Pass data from the controller to the view.

Hello huzaiifa

Controller.php:

```
<?php

namespace App\Http\Controllers;

use Illuminate\Http\Request;

class Fristcon extends Controller
{
    function showdata($name){
        return view('app', ['name' => $name]);
    }
}
```

App.blade.php:

```
<h1>Hello {{$name}}</h1>
```

Web.php:

```
<?php
```

```
use Illuminate\Support\Facades\Route;  
use Inertia\Inertia;
```

```
Route::get('/', function () {  
    return Inertia::render('welcome');  
})->name('home');
```

```
Route::middleware(['auth', 'verified'])->group(function () {  
    Route::get('dashboard', function () {  
        return Inertia::render('dashboard');  
    })->name('dashboard');  
});
```

```
require __DIR__.'/settings.php';  
require __DIR__.'/auth.php';
```

```
use App\Http\Controllers\Fristcon;  
Route::get('show/{name}', [Fristcon::class, 'showdata']);
```
